## Initial HygieneConnect

Measurably better hand hygiene

Reducing the risk of cross-contamination,  
ensuring confidence in compliance

Initial®

## How it works

# Initial HygieneConnect

An easy-to-install monitoring system that directly measures employee hand hygiene compliance

Hand hygiene is necessary and critical in reducing the risk of cross-contamination. Good hand washing prevents the spread of bacteria and viruses. In practice this is not always easy to achieve, especially in sectors where companies have to comply with hand hygiene audits. Monitoring hand compliance ensures safer environments and sustainable profitability in the long term - HygieneConnect helps you achieve this at a fraction of conventional costs.

### How HygieneConnect works

Sensors measure the number of visitors entering a toilet or critical control area and the number of people using soap to wash their hands. A calculation of these numbers gives the hand hygiene (washing) compliance of up to 99.7% accuracy. You can view the information and analyse the data online via multiple devices (such as desktop, tablet and smartphone).

### HygieneConnect motivates your employees

HygieneConnect is proven to reduce non-compliance by at least half, ensuring you achieve a greater hygiene status. Every employee who visits the toilet / critical control area can view the monitor for the current level of hand hygiene compliance. Experience shows that it encourages employees to wash their hands properly.

### Improved hygiene as a result

The motivating force of HygieneConnect ensures that you achieve higher hygiene standards and reduce the risk of cross-contamination. The data and information available from HygieneConnect is incredibly valuable, especially for HACCP and supplier audits. You have direct insight into hand hygiene compliance in your company enabling you to meet the specific requirements within your industry.

### Expert advice

Our Initial sales consultants have been trained with an in-depth understanding of key priorities of your industry. Following a comprehensive on-site evaluation, our experts will tailor a solution to washrooms, critical control hand wash areas, staff routing and access points within your premises.

Would you like measurably better hand hygiene and direct insight into your current hand hygiene status?

Please contact your account manager or visit:

Small wireless sensors are placed at the entrance / exits and below the hand soap dispensers to monitor usage.

The data collected from the sensor is delivered real-time (via 3G) to the cloud (every 15 minutes).

You can analyse the essential information and results wherever you are - on your desktop, tablet or smartphone, with access 24 hours a day, 7 days a week, 365 days a year.
