Stop the journey of the germ with **no-touch hygiene solutions**

Washroom surfaces touched frequently can become reservoirs for microorganisms and pathogens and there are many potential risks arising out of recontamination of hands from contaminated surfaces.

Transient organisms are easily transmitted to people and inanimate surfaces, such as internal door handles and cubicles. When touched, these germs can be easily transferred person to person, surface to person or via the air.

With built-in sensor technology, our no-touch hygiene solutions reduce the number of touchpoints during a washroom visit and help to stop the spread of germs from surfaces to hand.

Stop the journey of the germ with our **no-touch hygiene solutions** today.

No-touch Hygiene Bundle from Initial

Sanitary Solutions

Give peace of mind with a discreet, easy-to-use and hygienic sanitary solution

Germs can spread easily in a toilet cubicle. Flushing can spread faecal matter and bacteria in the air and onto surfaces up to 20ft, including waste disposal units. Touched regularly, they can act as receptacles for bacteria. Our no-touch Feminine Hygiene units and Incontinence Waste Bins have integrated sensor technology that eliminates the need for physical contact when opening or closing the lid.

Handwashing Solutions

Versatile soap dispensers that prevent cross-contamination

Our range of no-touch, anti-microbial soap dispensers, combined with our high-performance consumables that kill 99.99% of bacteria, offer superior handwashing. They're ideal for key hygiene hotspots such as washrooms, kitchens and food preparation areas because they can promote handwashing compliance among employees and minimise the risks of cross-contamination.

Hand-drying Solutions

Our no-touch dispensers are the convenient and hygienic way to dry hands

Wet hands carry a greater risk of cross-contamination than dry hands, spreading 1,000 times more bacteria. Initial's range of no-touch paper towel dispensers reduce the amount of moisture and the number of microorganisms left on hands after washing, thereby stopping the risk of recontamination.

Sanitising Solutions

Our hand sanitisers are proven to reduce the risk of cross-contamination

Our range of hand sanitiser solutions includes intelligent, non-contact sensor technology and high-performance sanitising consumables. Positioned at key hygiene hotspots throughout your premises in high-traffic areas, such as outside toilets or receptions, regular sanitising can help prevent recontamination and the spread of germs via hand-to-surface or hand-to-person contact.

Why Initial

Initial provides a dedicated and expert hygiene service. We offer the widest range of washroom hygiene services, including the provision and maintenance of products such as:

- soap and hand sanitiser dispensers
- hand dryers
- air care solutions
- washroom cubicle sanitisers
- feminine hygiene units
- toilet paper dispensers
- floor protection mats
