

Rentokil Initial

Protecting People. Enhancing Lives.

Introducing HygienicTouch

30%

Of people **don't wash their hands** after using the toilet

66%

Of people **don't use soap** when washing their hands

100%

Of people **do use the door handle to exit**

One of the major hot spots for germs in the workplace is the door handles. The frequent and inevitable use of most **door handles** means that **they are one of the fastest ways for infections and viruses to spread.**

Initial HygienicTouch is a **door handle cover and push plate that protects your hands from cross-contamination** by being a barrier between you and dirty doors and door handles. It is a complementary solution to work alongside the hand hygiene process - Hand Washing, Hand Drying and Hand Sanitising. The HygienicTouch solution range is the **final extra protection in the Hand Hygiene cycle.**

HygienicTouch Product Range

HygienicTouch Handle & Lever

HygienicTouch Push Plate

Non-intrusive, antibacterial door handle cover that 'snaps' onto existing door handles

Suitable for washroom and communal rooms across a building

Kills 99.99% bacteria and H1N1 viruses

Benefits

- Creates a cleaner, safer environment
- Reduces cross-contamination of germs
- Reduces staff absenteeism
- Convenient and pleasant to use
- Fully recyclable & uses no chemicals
