**A sustainable
hand-drying
solution that will
blow you away**

Luna Dry

The finishing touch [free]

Good hand hygiene is one of the most effective ways to prevent the spread of germs and a high percentage of food-borne diseases are spread by contaminated hands. Hand drying is an integral part of good hand hygiene as wet hands can spread up to a thousand times more bacteria than dry hands.

Luna Dry is a stylish, sustainable hand dryer combining the latest technology and high aesthetics with environmentally friendly credentials while remaining cost effective.

While high-performance hand dryers are effective at drying hands fast, Luna Dry achieves this by using a lot less power and producing considerably less carbon emissions.

Low environmental impact without compromising style or efficiency

Low energy and carbon emissions – Fast, efficient, low-energy motor dries hands in just 12 seconds meaning low carbon emissions and a low running cost.

Reduced waste and more hygienic – The only hand dryer with a HEPA 13 media filter featuring an intelligent indicator that informs you when a replacement is required. This helps reduce unnecessary waste as you only change the filter when needed.

No daily waste management required (as with paper towels) and no time, resources or costs associated with monitoring, restocking or reordering.

Long lasting – won't end up in a landfill in a few years – Long-life brushless digital motor with 5,000 service hours makes this a robust solution that could work for up to 20 years. The mouldings are manufactured in high-grade, fireproof 94V0 ABS and the IK strength rating is IK08.

Minimises unnecessary travel – Long-life brushless digital motor, plug-and-play model and Terra4 docking station minimise unnecessary travel as you only need an engineer for installation – not for servicing, maintenance or replacement.

Low Noise – Optional quiet mode functionality reduces noise to 67dB from 72dB to minimise noise pollution.

Hygienic and no-touch design – Protective antimicrobial cover with scratch-resistant surface and no-touch design prevents cross-contamination and reduces the risk of infection.

Environmentally safe recycling – Compliant with EU WEEE Directive: manufactured with high-quality parts and materials that can be reused and are suitable for recycling at the end of life.

Planet Mark certified – Manufactured by Velair – a Planet Mark certified company (an internationally recognised sustainability certification demonstrating a commitment to creating a more sustainable world).
